

ELT 244: Conduit Bending and Installation

This course provides students with skills needed to properly bend electrical metallic tubing, rigid galvanized and intermediate metal conduit, and PVC conduit. Emphasis is placed on the theory and practical application of conduit bending methods. Upon completion, students should be able to measure, layout, and successfully bend conduit using hand, mechanical, and hydraulic benders.

Credits: 3

Prerequisites:

Permission of instructor.

Program: [Electrical Technology](#)
