

AVM 200: AVM 200: Introduction to Unmanned Aircraft Systems

[This course will introduce students to unmanned aircraft systems \(UAS\). It will cover UAS history, FAA regulations, National Airspace, UAS platform types and categories, the usage of UAS, and the safe operation of UAS. Upon completion of this course, students will know how to apply the FAA regulations to safely operate UAS. This course will also prepare students for the knowledge test for the FAA remote pilot license.](#)

Credits: 3

Prerequisites:

None
